```javascript
const[apidata, setApidata] = useState({})
    const  apicall = async ()=>{
        try{
            const res= await axios.get(`https://www.googleapis.com/customsearch/v1?key=AIzaSyA_toGoJ9frU-Fe

            setApidata(res.data)
            console.log(res.data)
            console.log(res.data.searchInformation.totalResults)
            // console.log(res.data.items[0].title)

        }
        catch(error){
            console.log(error.message);
        }
    }

    useEffect(()=>{
        apicall();
    },[])
    return(
```

```jsx
        <div className="show-data">
            <div className="about-result">
                <p>About {apidata.searchInformation.searchTime} </p>
            </div>
        </div>

        </>
    )
}
export default SearchPage
```
